NDRRMC UPDATE

BULUSAN VOLCANO BULLETIN

Releasing Officer

USEC BENITO T. RAMOS

Executive Director, NDRRMC and
Administrator, OCD

DATE : 18 December 2010, 8:00 AM

Source: DOST-PHIVOLCS

I. BULUSAN VOLCANO BULLETIN:

The seismic network around Bulusan Volcano (12°46.2'N, 124°03'E) recorded three (3) volcanic earthquakes during the past 24 hours. Emission of white wispy steam was observed at the northwest vents, while no steaming activity was noted at the crater and southeast vents. No sulphur dioxide (SO₂) flux was detected during the measurements conducted yesterday.

ALERT LEVEL 1 remains in enforced over Bulusan Volcano area:

1. The public is strongly advised not to venture inside the 4-kilometer radius Permanent Danger Zone (PDZ) because the area is at risk to sudden steam and ash explosions.
2. Due to the prevailing wind direction, residents located in the northwest and southwest sectors of the volcano are reminded to take precautions against ashfalls.
3. Civil aviation authorities must also advise pilots to avoid flying close to the volcano's summit as ejected ash and volcanic fragments from sudden explosions may pose hazards to aircrafts.
4. Furthermore, residents near valleys and river/stream channels should be vigilant against sediment-laden stream flows and lahars in the event of heavy and continuous rainfall.

II. ACTIONS TAKEN:

- NDRRMC Advisory on BULUSAN VOLCANO BULLETIN was disseminated to RDRRMC-OCD Region 5 through SMS, facsimile, website and NDRRMC Twitter account for further dissemination to their respective local DRRMCs from the provincial down to the municipal levels
- DOST-PHIVOLCS is closely monitoring Bulusan Volcano's activity and any significant development will be immediately relayed to all concerned
