

## **NDRRMC UPDATE**

### **Weather Outlook for JUNE 2013**

Releasing Officer:

  
**USEC EDUARDO D DEL ROSARIO**  
Executive Director

**DATE: 11 June 2013**

Source: PAGASA-DOST

#### **I. OVERVIEW**

Most climate models predict ENSO-neutral continuing through June-July-August of 2013.

The weather systems that are likely to affect the country for June are the Southwest Monsoon (SW), Intertropical Convergence Zone (TCZ), Low Pressure Areas (LPAs), ridge of High Pressure Areas (HPAs) and two (2) or three (3) tropical cyclones to enter the Philippine Area of Responsibility (PAR). Generally near normal rainfall conditions are expected during the next month except for some areas in central and eastern Luzon that may receive above normal rainfall and some patches of lands in northern Mindanao with below normal rainfall extending over some areas of central Visayas including Mindoro. Southwest monsoon will likely commence during the first half of June and may be followed by the onset of the rainy season.

Slightly cooler than normal air temperatures will likely be felt in most parts of the country. Predicted ranges will be as follows: 22°C – 35°C over Luzon, 16°C – 25°C over mountainous areas of Luzon, 24°C – 34°C over Visayas, 24°C – 33°C over Mindanao, and 18°C – 30°C over mountainous areas of Mindanao.

PAGASA will continue to monitor the day-to-day rainfall/weather conditions and the large-scale climatic patterns that will affect the country. Meanwhile, the public is advised to take precautionary measures against floods and rain-induced landslides particularly over the western sections of the country as the onset of the rainy season will likely to start.

#### **II. ACTION TAKEN**

- **Weather Outlook for June 2013** was disseminated to all OCD Regions through facsimile and website for further dissemination to their respective Local Disaster Risk Reduction and Management Councils (LDRRMCs) from the provincial down to the municipal levels.
