Flooding due to poor drainage system & accumulation of rainwater still remain in the low-lying urbanized areas.	Dagupan City & parts of Urdaneta City
Water level of Lower Main Agno River will continue receding until it reaches below alert level stage. Likewise, water level of allied rivers, particularly Pantal-Sinocalan Rivers are still above alert level stage but will continue to recede slowly until the next few days. Minor flooding due to accumulation of rainwaters (ponding) in the low-lying areas within the basin to subside further. With this development, unless significant rains will occur in the immediate future to adversely affect the basin. This is the Final Bulletin.	

The residents and the Local Disaster Risk Reduction and Management Councils (DRRMC's) concerned are still advised to further maintain precautionary measures to mitigate adverse impacts of river flooding combined with the effects of tide, flooding due to ponding and at areas with poor drainage systems.

Let's untiringly aim for zero casualties.

Submit report on actions taken.
