

NDRRMC ADVISORY

TO : Chairperson of RDRRMC/OCDRO I
FROM : Executive Director, NDRRMC and Administrator, OCD
SUBJECT : Flood Bulletin No. **07 (FINAL)** for Agno River Basin and Allied Rivers
DATE : **18 September 2018**

Source: PAGASA-DOST Issued at 04:00 AM, 18 September 2018

Past 24-hrs observed rainfall: **2.1** mm
Forecast 24-hrs: **Light to Moderate rains**

Expected Basin Response:

Water Level/Raingauge Station	River/Lake/Swamp Trend at Station	Flood Situation Message	Low-lying areas likely to be affected
Carmen Station / Agno River	Now at 1.67 m. Slow Recession to reach Below 1.28 m. Alert Water for the next 12 Hrs	Flooding is no longer possible San Roque dam release as of 3:00 am today: Inflow= 396 cms Outflow= 880 cms	Parts of Rosales & Villasis, Sto. Tomas, Alcala, Bautista
San Vicente Station / Lower Agno River	Now at 4.30 m. Slow Recession to reach 3.68 m. Alarm water Level for the next 12 Hrs	Flooding is no longer possible San Roque dam release as of 3:00 am today: Inflow= 396 cms Outflow= 880 cms	Bayambang, Urbiztondo, Mangatarem, Aguilar, Lingayen
Sta. Barbara Station / Sinocalan River (Allied)	Now at 6.41 m. still Above alarm water But it will continue to Recede slowly	Flooding to subside slowly But still remain for several Days	Sta. Barbara, Calasiao, Dagupan City & Portions Of Binmaley
Mapandan Station / Angalacan River (River)	Now at 1.75M below alert water level	Flooding still persist in riverside areas	Mapandan, San Fabian, Mangaldan
Flooding due to poor drainage system & accumulation of rainwater in the low-lying urbanized areas			Dagupan City & Urdaneta City
Water level of lower main Agno River will continue recede slow until it reaches below alert level stage. Likewise, water level of allied rivers, particularly Pantalan-Sinocalan rivers still above alarm level stage but will continue to recede slowly until the next several days. Flooding due to accumulation of rainwaters (ponding) in the low-lying			

areas within the basin to subside further. With this development, unless significant rains will occur in the immediate future to adversely affect the basin, this is the **final bulletin**.

People living near mountain slopes, low-lying areas, particularly areas with poor drainage systems, coastal or high tide-affected areas, adjacent to or along the above-mentioned waterways and the Local Disaster Risk Reduction Management Councils (LDRRMC's) concerned are still advised to be alert for possible landslides, urban flooding, coastal flooding, flash floods and/or river flooding.

Let's untiringly aim for zero casualties.

Submit report on actions taken.

**BY AUTHORITY OF THE CHAIRPERSON,
NDRRMC:**

USEC. RICARDO B. JALAD
Executive Director, NDRRMC and
Administrator, OCD
