I. Situation Overview:

- Dengue is the fastest spreading vector-borne disease in the world endemic in 100 countries. It is transmitted by day biting *Aedes aegypti* and *Aedes albopictus* mosquitoes and is a viral disease with no known vaccine or specific antibiotics. Effective surveillance can also help in reducing cases and deaths if areas with clustering of cases were identified early.
- The Philippine Integrated Disease Surveillance and Response (PIDS) data for Western Visayas reported that the number of Dengue cases exceeded the epidemic threshold in the period of 1 January - 15 June 2019.
