## NDRRMC UPDATE

### Situational Report No. 24 re Taal Volcano Eruption

Releasing Officer:

*for:*   
**UNDERSECRETARY RICARDO B JALAD**  
Executive Director, NDRRMC and  
Administrator, OCD

**DATE : 19 January 2020, 6:00 PM**

#### **I. SITUATION OVERVIEW**

##### **A. Taal Volcano Activity as of 19 January 2020, 6:00 PM**

*Source: DOST-PHIVOLCS*

Since 8:00 AM this morning, Taal Volcano's activity has been generally characterized by weak emission of steam-laden plumes 300 to 500 meters high from the Main Crater that drifted to the general southwest.

The Philippine Seismic Network (PSN) plotted a total of seven hundred one (701) volcanic earthquakes since 1:00 PM, 12 January 2020. One hundred seventy-six (176) of these were felt with intensities ranging from Intensity I to V. Since 5:00 AM to 4:00 PM today, there were ten (10) volcanic earthquakes plotted, including one (1) felt event with intensity I.

From 5:00 AM to 4:00 PM today, the Taal Volcano Network, which can record small earthquakes undetectable by the PSN, recorded two hundred forty-four (244) volcanic earthquakes including three (3) low-frequency earthquakes. Such intense seismic activity likely signifies continuous magmatic intrusion beneath the Taal edifice, which may lead to further eruptive activity.

**Alert Level 4** remains in effect over Taal Volcano. This means that hazardous explosive eruption is possible within hours to days. DOST-PHIVOLCS strongly reiterates total evacuation of Taal Volcano Island and high-risk areas as identified in the hazard maps within the 14-km radius from Taal Main Crater and along the Pansipit River Valley where fissuring has been observed. Based on PAGASA wind forecast, if the eruption plume remains below five (5) km, ash will be drifted to south and southwest of the Main Crater; however, if a major eruption occurs during the day and eruption column exceeds 5 km, ash will also be drifted to the eastern and northeastern sectors and may fall on portions of Batangas, Laguna and Quezon. Residents around the volcano are advised to guard against the effects of heavy and prolonged ashfall. Civil aviation authorities must advise pilots to avoid the airspace around Taal Volcano as airborne ash and ballistic fragments from the eruption column pose hazards to aircraft. DOST-PHIVOLCS is continually monitoring the eruption and will update all stakeholders of further developments.

## B. 3-Day Wind Forecast for Taal Volcano (19 January 2020, 5:00 PM – 21 January 2020, 5:00 PM)

Source: DOST-PAGASA NCR-PRSD

Batangas, Cavite, and Laguna will have cloudy skies with isolated light rains.

HEIGHT (Above Sea Level)	3-Day Forecast Wind Profile		
	19 January 2020	20 January 2020	21 January 2020
1.5 km	10-20 kph from the Northeast to East	10-20 kph from the Northeast to East	10-20 kph from the East
3.0 km	<b>10-20</b> kph from the West to Northwest	15-30 kph from the Northeast to East	15-30 kph from the East
5.0 km	15-30 kph from the East to Southeast	15-30 kph from the East to Southeast	15-45 kph from the East to Southeast
7.0 km	15-20 kph from the South to Southeast	15-30 kph from the South to Southwest	15-45 kph from the Southwest to West
10.0-12.0 km	15-20 kph from the West to South	15-30 kph from the South to Southwest	15-72 kph from the Southwest to West

If the eruption column remains at **3.0 km** or below, the ash plumes will be drifted to the municipalities **southwest and west** of Taal Volcano. However, if a major eruption occurs within the forecast period and the column exceeds **5 km**, ash plumes will also be drifted over the **Metro Manila, Laguna, and some parts of Rizal and northern Quezon**.
