Situational Report No. **69** re Taal Volcano Eruption

Releasing Officer:

UNDERSECRETARY RICARDO B JALAD
Executive Director, NDRRMC and
Administrator, OCD

DATE: 08 February 2020, 6:00 PM

I. SITUATION OVERVIEW

A. Taal Volcano Activity

08 February 2020, 8:00 AM

Activity in the Main Crater in the past 24 hours has been characterized by moderate emission of white to dirty white steam-laden plumes rising 200 to 300 meters high before drifting southwest. Sulfur dioxide (SO₂) emission was measured at an average of 54 tonnes/day on 07 February 2020.

Alert Level 3 is maintained over Taal Volcano. DOST-PHIVOLCS reminds the public that sudden steam-driven and even weak phreatomagmatic explosions, volcanic earthquakes, ashfall, and lethal volcanic gas expulsions can still occur and threaten areas within Taal Volcano Island and nearby lakeshores. DOST-PHIVOLCS recommends that entry into the Taal Volcano Island as well as into areas over Taal Lake and communities west of the island within a seven (7) km radius from the Main Crater must be strictly prohibited. Local government units are advised to assess areas outside the seven-kilometer radius for damages and road accessibilities and to strengthen preparedness, contingency and communication measures in case of renewed unrest. People are also advised to observe precautions due to ground displacement across fissures, frequent ashfall and minor earthquakes. Communities beside active river channels particularly where ash from the main eruption phase has been thickly deposited should increase vigilance when there is heavy and prolonged rainfall since the ash can be washed away and form lahars along the channels. Civil aviation authorities must advise pilots to avoid flying close to the volcano as airborne ash and ballistic fragments from sudden explosions and wind-remobilized ash may pose hazards to aircraft. DOST-PHIVOLCS is closely monitoring Taal Volcano's activity and any new significant development will be immediately communicated to all stakeholders.

B. Volcanic Earthquake

The Taal Volcano Network (TVN) plotted a total of **2,280 volcanic earthquakes** as of **08 February 2020, 1:43 PM.**
