

NDRRMC UPDATE

Severe Weather Bulletin No. 02 for Tropical Storm "IGME" (I.N. BAVI)

Releasing Officer:

UNDERSECRETARY RICARDO B JALAD
Executive Director, NDRRMC
and Administrator, OCD

DATE : 22 August 2020, 11:00 AM

Source: DOST-PAGASA issued on 22 August 2020, 11:00 AM

"IGME" INTENSIFIES INTO A TROPICAL STORM AS IT MOVES TOWARDS SOUTHERN RYUKYU ISLANDS.

Track and intensity outlook:

- "IGME" is forecast to track generally northeastward throughout the forecast period. It is likely to pass very close or over Yonaguni Island in the southern Ryukyus (Japan) **tonight and leave the Philippine Area of Responsibility (PAR) between tonight and tomorrow early morning.**
- This tropical cyclone is likely to steadily intensify in the next couple of days. It is forecast to reach severe tropical storm category within 24 hours.

Hazards affecting land:

- No tropical cyclone wind signal is currently in effect. However, intermittent gusts may be experienced over Batanes and Babuyan Islands due to the Southwest Monsoon slightly enhanced by "IGME".
- **Today, the Southwest Monsoon will bring light to moderate with at times heavy rains over Batanes, Babuyan Islands, Ilocos Region, Cordillera Administrative Region, Zambales, and Bataan.**
- Flooding and rain-induced landslide may occur during heavy or prolonged rainfall especially in areas that are highly or very highly susceptible to these hazards. The public and local disaster risk reduction and management offices concerned are advised to monitor the Rainfall/Thunderstorm Advisories and Heavy Rainfall Warnings from PAGASA Regional Services Divisions and take appropriate measures.

Hazards affecting coastal waters:

- Those with small seacrafts are advised not to venture out over the northern and western seaboard of Luzon due to moderate to rough seas (northern: 1.2 to 3.4 m, western: 1.2 to 2.8 m)

Other disturbance being monitored:

- **At 10:00 AM today, a Low Pressure Area (LPA) was estimated based on all available data at 295 km East of Davao City (7.6°N,128.5°E). This LPA is less likely to develop into a Tropical Depression in the next 48 hours. However, it will bring light to moderate with at times heavy rains over Mindanao.**
