FINAL REPORT re Preparedness Measures and Effects of Typhoon “ROSITA” (I.N. YUTU) (27 – 31 October 2018)

Releasing Officer:

USEC RICARDO B. JALAD
Executive Director, NDRRMC and
Administrator, OCD

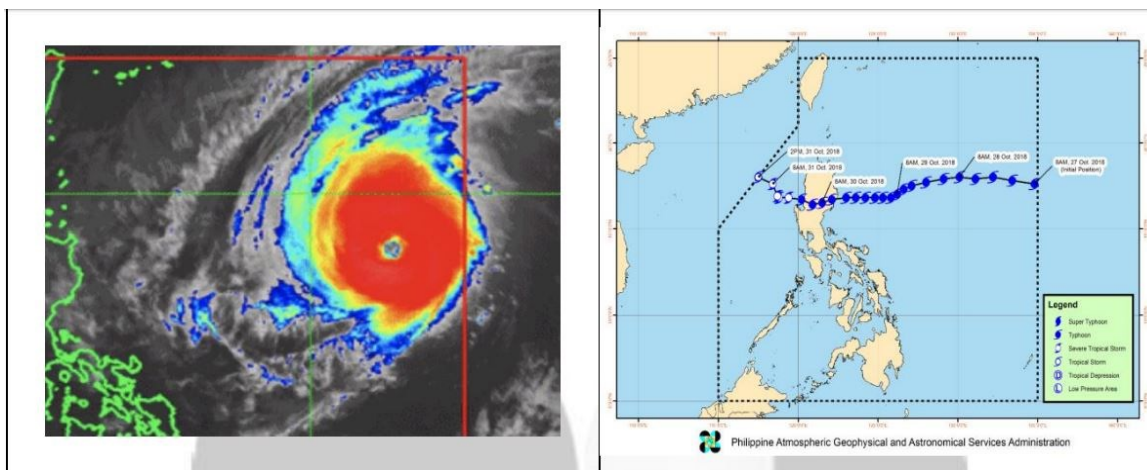

Sources: DOST-PAGASA, DILG, DSWD, DOH, DepEd, DoE, OCD, MGB-DENR, PCG, PIA, DPWH, DA, OCDROs I, II, III, CALABARZON, MIMAROPA, V, VI, VII, VIII CAR, and NCR

I. SITUATION OVERVIEW

A. Chronology of Events

Typhoon (TY) ROSITA is the 18th tropical cyclone (TC) that entered the Philippine Area of Responsibility (PAR) in 2018 and also the 2nd TC for the month of October. The international name “YUTU” was contributed by China, which refers to the “rabbit” character in a Chinese story.

ROSITA formed and became a tropical depression (TD) over the islands of Micronesia on 21 October 2018. The next day, the system intensified into a tropical storm (TS) and became a severe tropical storm (STS) 12 hours later. On 23 October 2018 at 8:00 PM, ROSITA attained typhoon (TY) category. Favorable atmospheric conditions allowed the typhoon to reach its peak intensity of 210 km/h in just a short period of time.

B. Tropical Cyclone Analysis

On 25 October 2018, 12:00 AM, ROSITA made landfall over the islands of Tinian and southern Saipan in the Northern Mariana Islands while maintaining

peak intensity. It weakened momentarily as it moved further away from the Islands.

The typhoon entered the PAR on 27 October at 6:30 AM. It re-intensified momentarily to 200 km/h, but its intensity began to decline several hours later. Its maximum winds dropped to 150 km/h just before making landfall in Dinapigue, Isabela on 30 October 2018, 4:00 AM. The rugged terrain of Northern Luzon and unfavorable atmospheric conditions caused ROSITA to weaken into a STS upon emerging into the coastal waters of La Union. The system left the PAR on 31 October 2018, 2:00 PM as a tropical storm. It weakened further into a TD while over the West Philippine Sea on 02 November 2018, 8:00 AM and then into a low pressure area later that day.

Strong winds and heavy rains caused by ROSITA brought widespread damage across Northern and Central Luzon, particularly in the Cordillera Administrative Region (CAR).
