I. SITUATION OVERVIEW

A. Chronology of Events

15 July 2018

The Low-Pressure Area (LPA) east of extreme Northern Luzon developed into a Tropical Depression (TD) and was named "HENRY".

16 July 2018

HENRY slightly accelerated while moving westward towards extreme Northern Luzon.

TD "HENRY" has made landfall over Camiguin Island, Cagayan, before traversing the Babuyan Group of Islands.

A Low-Pressure Area was estimated based on all available data at 945 km East of Infanta, Quezon.

17 July 2018

TD "HENRY" made landfall over Fuga Island, and over Dalupiri Island, Cagayan and is now heading towards the West Philippine Sea.

18 July 2018

The Low-Pressure Area east of Northern Cagayan has developed into a Tropical Depression and was named "INDAY".

"INDAY" has intensified into a Tropical Storm as it continues to move northeastward.

19 July 2018

"INDAY" has slightly intensified as it moves north-northeastward over the Philippine Sea.

20 July 2018

“INDAY” has intensified into a Severe Tropical Storm as it continues to move northwestward.

21 July 2018

“INDAY” exited the Philippine Area of Responsibility at 3:00 AM.

The Low-Pressure Area (LPA) West of Ilocos Sur has developed into a Tropical Depression (TD) and was named "JOSIE". At 1:00 PM, It slightly intensified as it approached Ilocos province.

22 July 2018

TD “JOSIE” traversed the Babuyan Islands with maximum sustained winds of 60 kph near the center and gustiness of up to 80 kph. TCWS No. 1 was raised in Batanes, Northern Cagayan including Babuyan Group of Islands, Ilocos Norte, northern portion of Ilocos Sur, Apayao, and northern portion of Abra.

At 4:00 PM, “JOSIE” moved north-northeastward over the Philippine Sea towards Southern Ryukyus. All TCWS have been lifted.

23 July 2018

TD “JOSIE” exited the Philippine Area of Responsibility.

B. Typhoon Analysis

HENRY developed from a low-pressure area embedded in the larger monsoon circulation located east of Luzon on 15 July 2018. HENRY maintained a westward track toward extreme Northern Luzon where it made landfall in Camiguin, Fuga and Dalupiri Islands (Babuyan Islands, Cagayan) at 9:00 PM on 16 July 2018, 1:00 AM, and 1:30 AM on 17 July 2018, respectively. It intensified into TS at 8:00 AM of 17 July 2018 as it exited the PAR.

HENRY did not produce significant amounts of rainfall within its core region. However, HENRY occurred during a very active southwest monsoon episode such that its enhancement thereof resulted in widespread and persistent heavy rains across western Luzon.

On 18 July 2018, 8:00 AM, INDAY developed from within the monsoon trough. After 36 hours, the system intensified into a tropical storm (8:00 PM, 19 July 2018) and then into a Severe Tropical Storm at 8:00 AM on 20 July 2018. The track of INDAY may have been influenced by the deep cyclonic circulation of the monsoon trough, this caused the system to move generally northeastward early in its lifetime. The TC eventually tracked north-northwest as it strengthened into a severe tropical storm. INDAY crossed the PAR boundary on 20 July 2018 at 1:00 AM while moving towards the Ryukyu Islands of southern Japan.

INDAY did not make landfall at any part of the country but it caused a significant enhancement of the Southwest Monsoon over the western section of Luzon particularly in the Ilocos Region, Cordillera Administrative Region, and Central Luzon. Dagupan City recorded the greatest accumulated rainfall of 625.1 mm. and recorded the greatest 24-hour rainfall 221.3 mm. respectively.

During the stay of STS "INDAY", the estimated highest maximum sustained winds attained is 90 kph near the center and gustiness of up to 115 kph with a central pressure of 986 hPa. Ten (10) Tropical Cyclone Warning for Shipping (IWS) and seven (7) Severe Weather Bulletin (SWB) were issued. No Tropical Cyclone Warning Signal was raised.

A Low-Pressure Area (LPA) west of Ilocos Sur has developed into a Tropical Depression in the morning of 21 July 2018 and was named "JOSIE" and sustained its strength as Tropical Depression upon development and exit to Philippine Area of Responsibility (PAR).

"JOSIE" enhanced the Southwest Monsoon (Habagat) during its stay on PAR and has dumped a great amount of rainfall and caused extensive flooding over National Capital Region

and on the provinces of Pangasinan, Zambales,

Bataan, Rizal, Bulacan, Cavite, Pampanga, Nueva Ecija, and Occidental Mindoro. Subic Bay station recorded the greatest accumulated rainfall and highest daily rainfall of 656.8 mm and 436.4 mm respectively.

During the stay of Tropical Depression "Josie", the estimated highest maximum sustained winds attained is 60 kph near the center and gustiness of up to 80 kph with a central pressure of 994 hPa. 9 Tropical Cyclone Warning for Shipping (IWS) and 14 Severe Weather Bulletin (SWB) were issued. Tropical Cyclone Warning Signal #1 was issued on the provinces of Batanes, Northern Cagayan, Babuyan Group of Islands, Ilocos Norte, Northern portion of Ilocos Sur, Apayao and northern portion of Abra.
