Effects of Oil Spill in CALABARZON, MIMAROPA, and Region VI

SitRep No. 125 for the Effects of Oil Spill in CALABARZON, MIMAROPA, and Region VI

July 14, 2023 08:00 am

On 28 February 2023, 4:16 AM, MT Princess Empress was reported half submerged at vicinity waters off Naujan, Oriental Mindoro with 20 men onboard and loaded with 800,000 liters of Industrial Fuel Oil. At 4:20 AM, the stranded crews were rescued by MV EFES, a foreign vessel, and have been reported to be in good physical condition.

On 01 March 2023, MT Princess Empress was declared totally submerged by the PCG Team upon negative sightings of the said vessel during a seaborne and aerial search.

The Search and Rescue Team of Coast Guard Sub Station Calapan together with Special Operations Unit (SOU) Oriental Mindoro and Marine Environmental Protection Unit (MEPU) proceeded to the area of the incident to locate the submerged vessel. However, the operation was unsuccessful due to inclement weather conditions.

Further, Coast Guard Station Oriental Mindoro coordinated with the owner of the submerged vessel for the actions to be undertaken regarding the incident. An aerial inspection was also conducted around the vicinity of the incident. Upon the conduct of the said inspection, a visible oil sheen in the vicinity waters of Oriental Mindoro was sighted in the area.

On 05 March 2023, oil slick sightings were reported to have reached the Islands of Quiniluban and Agutaya in the Municipality of Agutaya, Palawan.

On 06 March 2023, BRP Hydrographer Ventura may have detected the possible site where the submerged MT Princess Empress is located. The site is about 1,200 feet or approximately 400 meters below sea level. It is located about Northeast of Pola, Oriental Mindoro but it is believed to have moved Southeast from its last known position where it completely submerged. However, this will require verification through the deployment of a remotely-operated vehicle (ROV) for the complete visualization.

On 20 March 2023, Japanese salvage vessel 'Shin Nichi Maru' carrying the Remotely-Operated Vehicle (ROV) arrived at the port of Calapan, Oriental Mindoro and deployed the ROV. Oil slick have been observed in the vicinity waters of Barangays San Agapito and San Agustin Verde Island, Batangas City.

On 21 March 2023, the ROV located the sunken MT Princess Empress and conducted assessment for possible damages.

On 01 April 2023, specialized bags from United Kingdom arrived in Calapan City, Oriental Mindoro. These specialized bags will be used for bagging method to seal off the leaks from the sunken MT Princess Empress.

On April 02, 2023, Dynamic Positioning Vessel (DPV) PACIFIC VALKYRIE equipped with Remotely Operated Underwater Vehicle (ROV) HYDROS arrived in Oriental Mindoro. The U.S. Navy Supervisor of Salvage and Diving (SUPSALV) contracted the DPV to conduct thorough surveys and three-dimensional mapping of MT Princess Empress. DPV PACIFIC VALKYRIE will execute remedial measures to mitigate the oil release coming from the sunken motor tanker using ROV HYDROS. ROV HYDROS is a 2,000-pound ROV designed to meet the rapid deployable salvage requirements to a maximum performance depth of up to 5,000 feet. The control system has an ROV dynamic positioning capability enabling the vehicle to dive via computer instruction allowing hands-free position keeping, auto-translate movement, following pre-programmed routes, and go-to-position functions.

The Department of Environmental and Natural Resources (DENR) has reported the results of the water quality testing conducted across thirty five (35) sampling stations in the municipality of Puerto Galera, Oriental Mindoro and its Barangays. The results released last April 14, 2023 shows that only 9 sampling stations have met the criteria for the water quality guidelines set by the Department of Environment and Natural Resources (DENR) Administrative Order 2016-08 or the Water Quality Guidelines and General Effluent Standards of 2016.

The RDRRMCs CALABARZON, MIMAROPA and VI conducted oil containment and collected oil waste on the shores in the following affected areas:

CALABARZON

- 240 liters of oily mixture
- 59 sacks of oil contaminated debris and 38 liters of tar balls were collected since Day 1.

MIMAROPA

- 47,506.30 liters of oily water mixture (offshore operations)
- 6,893 sacks and 22 drums of oil contaminated debris
- 547.5 drums
- 71 tonner bags

Based on Rapid Assessment by DENR Biodiversity Management Bureau from 06-10 March 2023, the total Habitat area affected are the following:

1. Corals: 2,251.95 Hectares
2. Seagrass: 1,040.66 Hectares
3. Mangroves: 1,604.23 Hectares

REGION VI

1. Sitio Liwagao, Brgy. Sibolo, Liwagao Island, Caluya, Antique
 - 2 KM estimated length of affected coastline
 - 8,000 liters or more of estimated volume of oily waste landed on the shores
 - 600 liters of oily water collected
 - 347 drums of sand/debris contaminated (oily waste collected)
 - 87 pails of sand/debris contaminated (oily waste collected)
2. Sitio Sabang, Brgy. Tinogboc, Semirara Island, Caluya, Antique
 - 4 KM estimated length of affected coastline
 - 8,000 liters or more of estimated volume of oily waste landed on the shores
 - 5,330 liters of oily water collected
 - 3,506 sacks of contaminated debris
 - 821 (1) tonner bags of garbage contaminated with oil (oily waste collected)
 - 14 drums of contaminated debris
 - 36 (1) tonner bags of contaminated sand
 - 80 drums of contaminated sand
 - 32 pails of contaminated sand
 - 185 sacks
3. Brgy. Semirara, Semirara Island, Caluya, Antique
 - 2 KM estimated length of affected coastline
 - 400 liters or more of estimated volume of oily waste landed on the shores
 - 396 - sacks of garbage/debris of oily waste collected
 - 8 tonner bag garbage/debris of oily waste collected

RELATED INCIDENTS
