

Kanlaon Volcano Eruption (2024)

SitRep No. 65 for Kanlaon Volcano Eruption (2024)

June 14, 2025 08:00 am

On 09 December 2024, an explosive eruption occurred at the summit vent of Kanlaon Volcano from 3:03 PM to 3:10 PM. The eruption produced a voluminous plume that rapidly rose to 4,000 meters above the vent and was bent and drifted by strong winds to the west-southwest. Pyroclastic density currents or PDCs descended the slopes on the general southeastern edifice based on IP and thermal camera monitors.

Ashfall was reported over a wide area west of the volcano while pyroclastic density currents or PDCs, hazardous mixtures of hot volcanic gas, ash, and fragmented rock, were generated at the base of the eruption column and descended the south-southeastern sides of the edifice based on camera monitors. The longest descent of the PDCs from the summit crater was estimated to be approximately 2 to 3.4 kilometers in Masolog, La Castellana, still within the four kilometer radius of the Permanent Danger Zone (PDZ).

In view thereof, DOST-PHIVOLCS raised the Alert Level of Kanlaon Volcano from Alert Level 2 (increasing unrest) to Alert Level 3 (magmatic unrest). This means magmatic eruption have begun that may progress to further explosive eruptions. All local government units are advised to evacuate the 6-km radius from the summit of the volcano and must be prepared for additional evacuation if activity warrants.

On 08 April 2025, 5:51 AM, a moderately explosive eruption occurred at the summit crater of Kanlaon Volcano. This lasted for 56 minutes based on seismic and visual recordings and generated a gray voluminous plume that slowly rose to 4,000 meters above the vent before bending and drifting west and southwest. Audible rumbling sounds of the eruption was reported. PDCs descended the southern slopes within a kilometer of the crater, in the jurisdiction of La Castellana, based on visual and thermal camera monitoring. Large ballistic fragments were also observed to have been thrown around the crater within a few hundred meters and caused burning of vegetation near the volcano summit. Thin ashfall has been reported in some areas of Negros Occidental and Negros Oriental.

Alert Level 3 (magmatic unrest) still remains over Kanlaon Volcano. This means that the explosive eruption may be followed by similar short-lived explosive eruptions in the short term or even progress to lava eruptions that generate lava flows and lava fountaining activity.
